## FUKUSHIMA CRISIS IN JAPAN

CHP Consultants is proud to announce that we are providing radiological instruments to the Japanese public. We have donated instruments used to monitor radiation levels on-site and also coordinated the donation of 30 “Instadose” dosimeters from Mirion Technologies and radiological instrumentation from the Oak Ridge Associated Universities to Project Hope.

Project Hope is an international relief organization which has sent a team of doctors to Japan (among other places). The Instadose dosimeters will be used by the doctors to continuously monitor their radiation exposure. Robert J. Gunter, CHP, continues to provide technical assistance to Project Hope helping monitor the medical team’s radiation exposure. Please visit [www.projecthope.com](http://www.projecthope.com) for additional information and/or to personally donate or volunteer to this cause. Thank you.
